nCoV: Portfolio Recommendations

Adding VJC & CTG on market pullback

nCoV spreading faster than SARS but higher level of preparedness

The nCoV outbreak has already outpaced SARS at 40,554 confirmed cases in 25 countries in eight weeks. This compares 8,096 cases in 27 countries for SARS that lasted for eight months (Nov 2002–Jul 2003). Vietnam has confirmed fifteen cases vs the 63 cases seen during SARS. Authorities have been quick to react to nCoV and suspended visas from China as early as January 31 compared to Vietnam's 40 initial confirmed cases at the onset of SARS in March 2003 (WHO first reported data on March 17 at 40 cases that quickly rose to a peak of 63 by March 22).

Fallout cuts China GDP growth by 0.4%p to 5.9% & Vietnam by 0.4%p to 6.4%

Our global macro team at KB Securities (Korea) estimates the outbreak may slow China's GDP if contained in 1Q by 0.4%p to 5.9% and if contained in 2Q by 0.6%p to 5.7% from 6.3%. Vietnam's slowdown if contained in 1Q likely at 0.4%p to 6.4% and a 2Q containment at 0.7%p to 6.1% by our estimates. This compares to an estimated slowdown to 6.1%–6.3% from the Ministry of Planning & Investment.

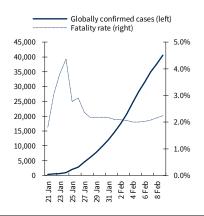

Expect similar impact to SARS: lower inflation/consumption but 2H easing

Inflation slowed to 2.8% from 4.4%, while wholesale/retail activity fell to 6.7% YoY from 7.3% YoY and transportation dropped to 6.3% YoY from 7.1% in 3Q 2003. GDP remained stable at 7.1% from 7.0% prior to the SARS outbreak. We expect a similar impact from nCoV, with the largest slowdowns expected for travel & tourism (Chinese 32% of all international tourists); China exports (15.7% of total exports); and capital imports (30% of imports from China). Importantly, Vietnam's higher level of China exposure – and the silver lining of lower inflation – increases the likelihood that authorities will introduce a stimulus package in 2H, including at least one cut to the benchmark rate and higher credit limits for the banks.

We add VJC and CTG to our model portfolio and some caution on PNJ

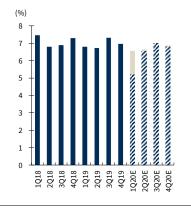

Airlines stocks have been one of the hardest hit sectors during the nCoV outbreak – with Vietnam Airlines (HVN) down 16.8% and Vietjet (VJC) down 11.9% since the Tet holiday – and we use this opportunity to [ADD] VJC to our model portfolio and [REMOVE] PetroVietnam Drilling & Well Services (PVD). With 2H stimulus likely should there be any negative impact from nCoV, we increase our exposure to the banking sector and [ADD] Vietinbank (CTG) to our model portfolio and [REMOVE] Power Construction 1 (PC1). Given possibility of weaker consumption in the luxury segment, we view Phu Nhuan Jewelry (PNJ) more cautiously in the near–term but continue to hold the counter in our model portfolio.

nCoV: Portfolio Recommendations

Reposition the model portfolio to best capture recovery after the nCoV outbreak stabilizes We reposition our model portfolio to best capture our outlook for recovery in stocks as the nCoV outbreak stabilizes. Main implications from the coronavirus outbreak are the cool off of inflation – which raises the likelihood of easing from the State Bank of Vietnam (SBV) – and stocks with long–term growth intact being oversold from the short–term shock of the outbreak. Changes to our model portfolio include: 1) adding Vietjet (VJC) as the airline stocks have taken the brunt of the shock from nCoV and believe lower fuel costs may offset lower passenger volumes; 2) adding Vietinbank (CTG) as the biggest beneficiary from higher credit limits as banks will likely be the target of any stimulus measures. We remove PetroVietnam Drilling & Oil Services (PVD) as nCoV will likely lead to lower oil prices in the near term and also remove Power Construction 1 on a loss cut.

We increase exposure to the banks by adding CTG on expectations for higher credit limits as part of 2H stimulus and add VJC as airlines one of the hardest hit sectors due to the outbreak

Table 1. Model Portfolio - Additions & Deletions

Ticker	Action	Rationale
		- Building on strong earnings recovery in 2019 & optimistic outlook for 2020
CTG	Addition	- Growing expectations for capital increase in 2020 to offset loan-growth concerns
		- Already improved asset quality and benign credit risks for 2020
		- nCoV outbreak impact meaningful but short-lived & fully-reflected in stock price
VJC	Addition	 Lower fuel costs silver lining to offset lower passenger volumes
		- Growth prospects intact as Long Thanh airport project schedule pulled forward
PVD	Deletion	- Negative earning growth in 2019 at -63% YoY and below expectation
PVD	Deletion	- Coronavirus fear hit oil price in the short term
PC1	Deletion	- Cut loss level
PCI	Detetion	- Negative earning growth in 2019 at - 24% YoY and below expectation

nCoV: China Macro Impact

Outbreak likely to delay any benefits to China from the US-China trade pact to 2H Implications for China from the outbreak according to our global macro team based in Korea include: 1) delaying benefits from the US-China trade pact and pushing back economic recovery to 2H; 2) near-term downturn in tourism and domestic consumption but no long-term impact to exports or employment; and 3) minimum GDP growth of 5.5% for 2020 with government stimulus including more infrastructure spending, faster pace of rate cuts and currency weakening.

Domestic services & exports to take the brunt of the shock

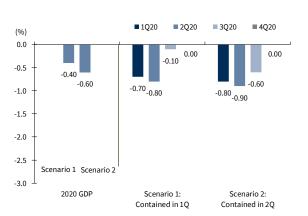

The coronavirus is expected to lead to: 1) contraction in the domestic service industry, including tourism; 2) lower exports with disruption to the Asian production value chain; and 3) indirect impact to investment and employment.

Base case (scenario 1) assumes April-May containment & China GDP to slow to 5.9% from 6.3% China's GDP expected to slow by 0.4%p for annual growth of 5.9% under scenario 1 (base case) that assumes the outbreak is contained by April or May, with economic damage concentrated in 1H. China's economic growth should slow to 5% in 1H, but recovery should be achievable for 2H. As in 2003, the Chinese government is expected to provide additional tax and liquidity support to affected sectors to boost domestic demand. Meanwhile, in 2003, China increased its reserve ratio requirement, but is expected to continue to lower its reserve ratio and cut interest rates in 2020.

Scenario 2 assumes July-August containment & China GDP could slow further to 5.7% from 6.3% but

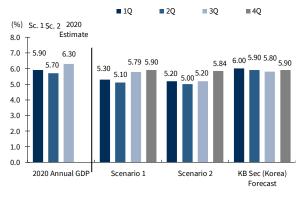

Should containment be pushed back to July or August, the impact to China's GDP could be larger at 0.6%p to slow annual growth to 5.7% (scenario 2). If the effects of the coronavirus continue until 3Q, China's economic recovery will likely be delayed. But this scenario also increases the outlook for more aggressive stimulus and our global macro team believes Chinese authorities will defend GDP growth at 5.5% announcing additional stimulus measures, including increased fiscal spending and tax cuts, to protect growth at around 5.5%. In addition, rate cuts will likely be faster than expected (about 20bps per year) to prevent any slowdown from reaching as low as 5.5%.

3

nCoV: Vietnam Macro Impact

Vietnam's 6.8% GDP growth plan may be difficult to achieve in 2020

Scenarios from the Ministry of Planning & Investment (MPI) are below the government's official 6.8% GDP growth plan. Containment by 1Q likely to see GDP growth slow to 6.3%, while 2Q containment would see GDP growth of 6.1% for 2020. The Ministry expects the impact to hit hardest in 1Q – with growth almost halving to 3.8% from its original target of 6.5% – and the most damage likely for tourism, agricultural and fishery exports and the import of capital goods. CPI estimates in both scenarios are 4.0% and 4.9%, respectively, for 2020.

Although 6.8% may be tough, several factors may offset the concerns of the Ministry Our scenarios estimate the impact from nCoV at 0.4% points if contained to 1Q and 0.8% point impact for containment by 2Q or 2020 GDP growth of 6.4% and 6.0% (please see *Outbreak Hits GDP*, February 10, 2020 for more details). In both scenarios, the impact to 1Q GDP is 1.4% points vs the MPI's 2.7% point impact to 1Q. Reasons for our more optimistic view are: 1) tourism season usually peaks in April and leaves room for recovery (flights to/from Hong Kong, Taiwan and Macau already resumed); 2) only trade across land routes have been negatively impacted and ports are still open for business; 3) imports of from China have been pulled forward due to the long Lunar New Year and most are capital goods that can be stored for import at a later date. Consequently, we estimate the impact to Vietnam's 2020 growth at: 1) tourism to hit growth by 0.4%p under scenario 1 and a 0.6%p in scenario 2; 2) agricultural & fishery exports – with short inventory life – to drop by 25% in 1Q; and 3) capital goods imports to fall by 10% in both scenarios with production disruptions in China.

Cooling inflation is the silver lining and government stimulus should also support 2020 GDP Slower domestic demand should also tame inflation and is the silver lining as seen during SARS in 2003. We expect the government to tap public investment funds and use large-scale projects to narrow any gap in GDP to the annual 6.8% target, including the North-South highway and Long Thanh airport projects. In terms of monetary policy, we expect 1H measures to include the State Bank of Vietnam (SBV) asking banks to cut lending rates to support businesses hit by the nCoV outbreak and 2H action – assuming inflation remains in check – to include easing of monetary conditions via a synchronous lowering of the interest rate ceiling, cut in the benchmark rate, lifting credit limits for banks that have met Basel II and measures to support systemic liquidity.

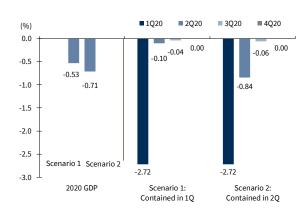

Table 2. Vietnam – Major macro indicators during SARS, 2Q 2002–3Q 2003 (%YoY)

GDP remained stable during SARS and the silver lining could be the cool off in inflation

% chg		Wholesale/

Exports to China (USDbn)	1.7	3.3	Value down 25% in Feb & Mar; value down 15% over next 3 months

nCoV: Market Impact

Airlines, agricultural & fishery exporters and domestic consumption companies all hit by the outbreak

Airlines (VJC, HVN, AST), agricultural & fishery exporters (ANV, VHC, HAG, DRC) and domestic consumption companies (SAB, BHN, GTN, MWG) have been the hardest hit stocks due to the outbreak. Among these, we believe the <u>airline</u> stocks offer the most opportunity for investors given the strong long-term growth outlook for the entire industry and being oversold, due to the shock to near-term earnings and share prices.

VJC our preferred airlines stock, MWG our top pick for domestic consumer and will hold off on fisheries for now Vietjet (VJC) is our preferred airline stock and newest addition to our model portfolio. We continue to hold Mobile World Investment (MWG) as our top pick for consumer names due to strong growth from the Bach hoa Xanh grocery chain. Although we expect a turnaround for the fishery industry in 2020 – as overseas markets in the US and Europe recover from the US-China trade war – the nCoV outbreak could delay this recovery due to falling exports to China. Moreover, we expect the central bank to increase the credit limits at banks as part of stimulus measures and expect Vietinbank (CTG) to be the biggest beneficiary and also add this to the model portfolio.

Markets recovered in HK/China after new confirmed cases peaked at the end of April 2003

Overall, we expect markets to recover after the number of confirmed cases peak as seen during SARS in 2003 (albeit this remains a moving target for the nCoV outbreak). Looking to Hong Kong – the epicenter of SARS – the Hang Seng recovered after new confirmed cases peaked at the end of April 2003.

VN-Index recovered much earlier with the SARS outbreak stabilizing in Vietnam weeks before China

Although being a less reliable indicator back in 2003, the VN-Index staged a recovery at the beginning of April when the number of confirmed cases peaked in Vietnam, making stabilization in the local market – and the fact that the bulk of cases of the coronavirus remain within China – the key event to focus on.

Hardest hit industries include the airlines, agricultural & fishery exporters and domestic consumption companies

to fade in late April 2003.

Fig 10. Vietnam - VN-Index performance during SARS, Nov 2002-Jun 2003

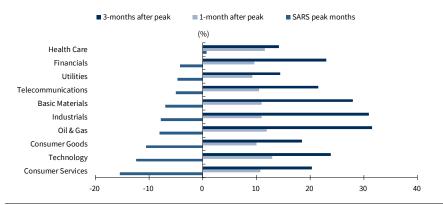

Source: Bloomberg, KB Securities Vietnam

Most sectors were negatively impacted from SARS but rebounded sharply after the outbreak stabilized. Outperformers included the Oil & Gas, Industrial, Basic Materials and Finance sectors.

The global aviation industry was hit the hardest during SARS amid the sharp slowdown in tourism, with Asian airline stocks lagging the global recovery as ground zero of the SARS outbreak.

Despite China- and Hong Kong-based air carriers being hardest hit from SARS, the steep falls in shares prices later proved to be a good entry point as the shares rebounded after containing the outbreak.

Appendix: SARS – China's Economic Growth Rate Falls by 0.9%p in 2003

SARS caused an estimated 0.9%p slowdown to China GDP growth

Our global macro team in Korea estimates that the SARS outbreak in 2003 led to a 0.9%p slowdown in China's GDP growth.

Despite a weak 2Q, real economic growth of 10.1% beat 2002's 9.1%

In 2003, China's realized a real economic growth rate of 10.1% – and higher than 2002's 9.1% growth – despite SARS slowing 2Q growth to 9.1% YoY (down 2%p) from 1Q's 11.1%.

China's tourism industry lost an estimated US\$5.6 billion due to SARS (or 0.34% of nominal GDP)

China's tourism industry took a direct hit from SARS, with revenue falling by 14% in 2003 (and dropping by 50% in 2Q alone) after averaging 14% growth for the previous five years. We estimate that China lost US\$5.6 billion in tourism revenue in 2003 or 0.34% of nominal GDP due to SARS. As a result, domestic demand industries – including transportation, wholesale and retailing, and lodging businesses – were all negatively affected by the outbreak. In addition, the impact was exacerbated by falling domestic demand and slowing consumption.

Domestic service industries slowed by 1%p to 9.5%

Growth in China's service industry (which accounts for 45% of GDP) fell by 1%p to 9.5% in 2003 from 2002's 10.5%. Main segments impacted by this slowdown were the transportation, storage and delivery industries as growth dropped to 6.1% in 2003 from the 7.1% seen in 2002.

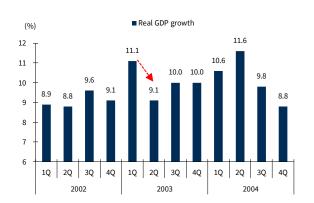

Surge in exports with China's entry into the WTO helped offset the slowdown from SARS

China's export sector grew by 12.7% in 2003 (compared to 8.5% in 2001 and 9.9% in 2002) and helped offset the negative impact to economic growth. In particular, China's entry into the WTO led to a 35% surge in exports (vs 22% in 2002). Nonetheless, we estimate the overall impact from SARS at a 0.9%p slowdown in China's GDP and slower global growth.

Stimulus measures included tax credits and credit expansion to the service sectors despite a 1.0%p hike to reserve ratios

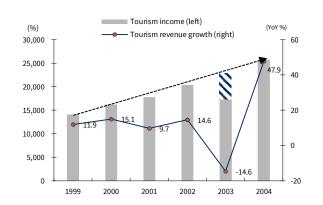

China's government also actively introduced stimulus measures to recover from SARS despite the central bank being in a tightening mode. These measures included tax benefits and credit loans to the service sectors such as private passenger transportation, tourism, passenger railways, catering and lodging. Support measures were announced even though overheating of the real estate market and excessive monetary easing (M2 growth was more than 20%) caused the central bank to raise the reserve ratio to 7.00% from 6.00% in September.

nCoV disruptions until April/May

February 12, 2020

Logistics Analyst - Nguyen Anh Tung tungna@kbsec.com.vn

4Q miss; hit hard by competition from Bamboo Air and delayed sales/leaseback bookings for Airbus deliveries 4Q earnings weak on: 1) increased competition from Bamboo Airway that led to an 8.3% YoY drop in passenger traffic; and 2) delayed sales/leaseback bookings that plunged by 49% YoY with only two Airbus deliveries vs nine during the same period last year. 4Q earnings fell by 65% YoY to VND539 billion, while revenue dropped by 25% YoY to VND13,925 billion. Full-year 2019 results were down 21% YoY to VND4,219 billion and revenue dropped by 3% YoY to VND52,049 billion.

Cutting 20E earnings by 14% to reflect nCoV outbreak and rollover to 20E forecasts & change to EV/EBITDAR raises target price to VND131,100; maintain HOLD

Flights to China have stopped since February 1 and we assume disruptions until April/May as seen in past outbreaks (Chinese tourists 32% of international arrivals). We cut our 20E earnings by 14% to reflect lower passenger volumes (including spillover to other domestic & international routes), weaker ticket pricing but some offset from lower fuel costs. Earnings momentum remains attractive at 35% YoY growth in 20E to VND6,066 billion as sales increase by 44% YoY to VND74,964 billion. Rolling over to 20E forecasts, our target price rises to VND130,100 as we base our target price on EV/EBITDAR. Currently, VJC trades at an EV/EBITDAR of 6.0x vs a peer average at low-cost carriers of 6.3x and we maintain our HOLD rating.

Long term benefits coming from the new Long Thanh Airport project

The government plans to increase investments in phase 1 (2025–2026) of the new Long Thanh Airport project (located 40km from Ho Chi Minh City) to VND112 trillion in March 2020. The new airport will boost passenger capacity to 25 million per year, allow new routes and help reduce operating costs on lower wait times.

Vietinbank (CTG: HOSE)

Coming in from the cold

February 12, 2020

Financials Analyst - Nguyen Thi Thu Huyen huyenntt@kbsec.com.vn

4Q earnings beat expectations and affirm the strong turnaround seen in 2019

Strong 4Q earnings due to: 1) net interest margin expansion from more loan mix to higher-yielding retail loans; 2) continued improvement in the cost-to-income ratio to 39% from 50% levels amid tighter staff costs; and 3) better asset quality, with the NPL ratio down to 1.2% from 2018's 1.6%. Full-year 2019 ROE now at 13.1% from 2018's 8.3%.

Overhang from IFC Corp stake sale nearing completion

According to press reports, International Finance Corp (IFC) – the investment arm of the World Bank – has sold about a third of its remaining 4.99% stake and we estimate the remaining portion at about US\$145 million or 3.4%. The IFC reduced its owner to below 5% in January 2020 after originally owning 10% when it bought shares and subordinated debt in 2011.

Slowly resolving the capital conundrum & higher credit growth cap expected for 2020

The government's recent announcement to boost charter capital should begin to resolve complications with the capital structure. Although the government may only boost charter capital via a stock dividend (instead of boosting overall capital), this – and the return to profitability – should allow a higher credit growth cap in 2020 and begin building the roadmap to meet Basel II requirements.

Moving target on capital resolution plan should narrow valuation discount

We expect better clarity on credit growth to continue narrowing CTG's valuation discount. Currently, CTG trades at a P/B of 1.3 times 2019 book value or a steep discount to the 1.5–1.6 times of peers (and the 4.0 times of Vietcombank).
